# Postera Fund **Crypto I**

ISIN: LI0385769448

---

**This document is promotional material as of January 2021.**  
The following information, which is provided by Postera Capital GmbH ("Postera Capital"), is intended exclusively for professional investors in Liechtenstein.

## Reasons to Invest in Cryptoassets

### **The Basis:** Blockchain Technology and the Internet of Value

Blockchain technology is one of the key technologies of the 21st century. In a blockchain, values can be stored and transmitted digitally without the need for a trusted intermediary. That's revolutionary. Previously, only information could be transmitted over the Internet; with blockchain it is now also possible for assets and values to be recorded and traded digitally. This creates the "Internet of Value".

"The blockchain is really going to change dramatically the whole nature of investing and saving in the future."

» **Myron S. Scholes,**  
Nobel laureate

### **Implementation:** Investing In Coins and Tokens

In the blockchain environment, the value and assets of the respective system are represented by cryptographically secured coins or tokens. The owner of these coins or tokens can access the respective blockchain or its applications. Tokens can be traded and prices are determined on large international exchanges. Through the acquisition of tokens, investors can participate directly in the value creation of the respective blockchain system and the applications based on it.

"Anyone with a practical or theoretical interest in financial markets should know about cryptoassets."

» **Harry Markowitz,**  
Nobel laureate

### **The Potential:** Digital Business Models of the 21st Century

The potential is enormous: all business models in which value is transmitted are potential use cases for blockchain technology. Digital money, the first blockchain application, is just one of many examples. In the future, the tokenization of assets will enable the storage and transmission of value in the digital world on decentralized platforms. Investing in cryptoassets is an investment in this digital future.

"Blockchain gives us unprecedented capabilities to create and trade value in society."

» **Don Tapscott,**  
World Economic Forum

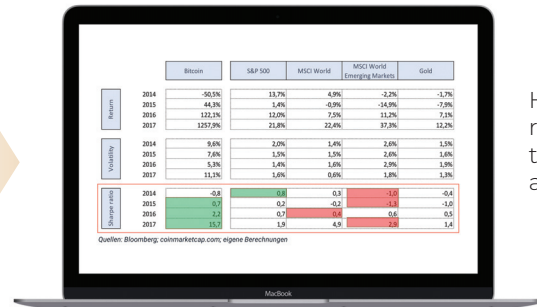

# Cryptoassets: An Attractive New Asset Class

Cryptographically secured coins or tokens are called cryptoassets. They are ideal as an addition to portfolios of professional investors as they offer a unique combination of positive features\*:

## Return

- Cryptoassets represent early stage investments in a key technology of the future
- Potential for extraordinary risk-adjusted returns

High risk-adjusted returns compared to established asset classes

## Diversification

- Low correlation with established asset classes
- Suitable for the diversification of portfolios

Low correlation with equity markets

## Liquidity

- Access via international exchanges
- High liquidity

24/7 trading

\* Past performance is not a reliable indicator of future performance

## Challenges

With high return potential, low correlation and high liquidity, cryptoassets are highly attractive alternative investments. However, in addition to their high volatility, cryptoassets pose a number of other challenges for investors: Given that the asset class is still young, there is a lack of qualified analysts for cryptoassets and qualified staff for the management of crypto portfolios. Operational aspects - in particular, trading and custody of cryptoassets - are complex and require sound technical knowledge as well as investment in dedicated infrastructure and processes.

# Fund Solution for Professional Investors

The Postera Fund - Crypto I is an Alternative Investment Fund (AIF) in the legal form of a trust pursuant to the Act on the Management of Alternative Investment Funds dated December 19, 2012, which implements the European AIFM Directive into Liechtenstein law. It is thus the first EU regulated fund that predominantly invests in cryptoassets. The fund is designed for professional investors seeking access to the asset class but do not want to bear the costs and risks of direct crypto investments. The fund enables investors to gain exposure to a diversified and actively managed crypto portfolio. Moreover, the fund is set up in a tax-efficient structure. The fund's weekly liquidity allows investors to manage their exposure to the asset class dynamically.

## Investment Strategy

- The fund invests in "blue chip" coins and tokens with a market capitalization of at least USD 100 million.
- The investment universe of the fund currently consists of 16 coins and tokens and is being continuously expanded.
- The portfolio of the fund is actively managed. As a result, opportunities in the market can be exploited and risks can be managed.
- Investment decisions are based on in-depth research that incorporates fundamental and technical factors. The research is further supported by Postera's proprietary machine learning algorithms.

## Advantages

### Regulated Structure

The fund operates as an Alternative Investment Fund (AIF), which is a structure that is tried and tested with professional investors. All parties have in-depth know-how regarding cryptoassets.

### Safe Storage

The assets of the fund are segregated and are held by a regulated depository. The Assets are predominantly kept in a so-called cold storage. This type of storage is designed to provide the highest level of security.

### Diversified Portfolio

The fund invests in a portfolio of individually selected cryptoassets, giving investors access to a diversified portfolio of cryptoassets.. This considerably reduces the risk as opposed to investing in individual cryptoassets.

### Active Management

Active management is based on sound research. In such a young and dynamic asset class as cryptoassets, active management adds value by enabling the fund's management to leverage market opportunities and manage risk.

### Weekly Liquidity

Shares in the fund are issued and redeemed weekly. This allows investors to manage their exposure to the asset class flexibly and dynamically according to their own risk preferences. Unlike many products available on the market, capital is not tied up on a long-term basis.

## Main Risks

Cryptoassets are a young and very dynamic asset class. The value of shares in the Postera Fund - Crypto I may therefore be subject to considerable fluctuations. The investment in cryptoassets is highly speculative and risky and can result in the total loss of invested capital. Investments are only suitable for experienced investors who fully understand these risks. Investors interested in this asset class should conduct their own research and, if necessary, seek independent legal, financial and, if necessary, tax advice. A detailed description of the risks associated with an investment in Postera Fund - Crypto I and its investing activities can be found in the current fund prospectus.
